

## High-quality power inverters from Modul-System

**Modul-System is focusing more and more on vehicle electrics, and are now offering their own high-quality power inverters.**

**"They are robust products designed to withstand the harsh environment of a service vehicle", explains Thomas Johansson, Vice President of Modul-System.**

The electrical system and the electrical accessories are important elements in a service vehicle. The latest additions to Modul-System's product range are true sinewave power inverters in sizes of 1000W, 2000W and 3000W.

"We always use high-quality products and carry out professional installations in our workshops to minimize the risk of fire or damaged equipment", explains Thomas Johansson.

Modul-System's inverters are CE marked, E-marked and tested for electromagnetic compatibility (EMC). They will operate on DC voltages of 10.5-15.5Vdc and have a display panel for battery status and load measurement. In addition, all inverters have overload and over-temperature shutdown to ensure that they will not become overheated or subjected to power demand beyond their rated capacity.

"We want to offer the best equipment on the market now that we are developing our own range of electrical products. This means functional and robust inverters that do not malfunction", says Thomas Johansson.

Shortly smaller inverters of 300W and 600W will be added to the Modul-System range.

### *About Modul-System*

*Modul-System develops, manufactures and installs racking systems for service vehicles. The company is represented in 40 countries and has over 40 years of experience in the industry. Modul-System is part of the Lifco group. Its head office is located in Mölndal just outside Gothenburg. For more information, please visit [www.modul-system.com](http://www.modul-system.com).*
